Please find below and/or attached an Office communication concerning this application or proceeding.

SP

<b>Office Action Summary</b>	<b>Application No.</b> 09/486,125	<b>Applicant(s)</b> SHETTY ET AL.	
	<b>Examiner</b> Ruth S. Smith	<b>Art Unit</b> 3737	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 27 September 2005.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 19-28 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 19-28 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on September 27, 2005 has been entered.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 19, 20, 22-25 are rejected under 35 U.S.C. 103(a) as obvious over applicant's admission of the prior art in view of Hoenninger, III et al. The claims are readable on the use of a conventional MRI system to perform two different scans on a patient except for entering all scan parameters before performing the scans and processing all of the collected data after all data has been collected and using an automated sequence controller. A conventional system involves the input of imaging parameters, the collection of data based upon the input and the processing of data and a determination that the scan is complete. The time it takes to set up for a second scan would inherently provide the patient enough time to breathe and hold the breath again and provide a dynamically changing delay time. Hoenninger III et al disclose the use of an automated sequence controller for an MRI system. The sequence controller provides for a sequencing of program instructions to allow the system to perform the desired scans. The sequencing of the program instructions inherently involves the use of some type of pointer. It would have been obvious to one skilled in the art to have used a sequence controller which is a well known expedient in the art for allowing the

system to carry out the desired scans in an automated fashion and to have entered all scan parameters before performing the scans and to process all of the collected data after all data has been collected in order to expedite the scanning process and reduce the patient's time in the bore of the magnet. If all input parameters are entered before data collection begins and all data is collected before processing begins, the patient can spend less time in the bore of the magnet. Modification of the prior art system to include such a controller would result in the use of a type of pointer to index through the desired scan sequences. Applicant fails to specifically set forth the delay time. The time it takes to set up for a second scan would inherently be adaptable and dynamically changing. The delay time would be based on the type of scan being set up and how long it takes to move the patient to set up such a scan. In the absence of any showing of criticality or unexpected results the delay time selected would have been obvious selection based upon the time it takes to move the patient to a second scan position.

Claims 19, 20, 22-25 are rejected under 35 U.S.C. 103(a) as obvious over Hurd et al in view of Hoenninger, III et al. Hurd et al disclose acquiring imaging data using a first set of parameters and then acquiring image data using a second set of parameters. After the scan is completed the image data acquired from each set of parameters is processed. It is a well known expedient in the art to provide a determination that the scan is complete before processing the data or removing the patient. Hoenninger III et al disclose the use of an automated sequence controller for an MRI system. The sequence controller provides for a sequencing of program instructions to allow the system to perform the desired scans. The sequencing of the program instructions inherently involves the use of some type of pointer. It would have been obvious to one skilled in the art to have used a sequence controller which is a well known expedient in the art for allowing the system to carry out the desired scans in an automated fashion and to have entered all scan parameters before performing the scans in order to expedite the scanning process and reduce the patient's time in the bore of the magnet. . Modification of the prior art system to include such a controller would result in the use of a type of pointer to index through the desired scan sequences. Hurd et al fails to

specifically set forth the delay time. The time it takes to set up for a second scan would inherently be adaptable and dynamically changing. The delay time would be based on the type of scan being set up and how long it takes to move the patient to set up such a scan. In the absence of any showing of criticality or unexpected results the delay time selected would have been obvious selection based upon the time it takes to move the patient to a second scan position.

Claims 26-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hurd et al in view of Hoenninger III et al as applied to claim 24 above, and further in view of Riederer et al. Riederer et al disclose an MRI system which includes a stimulus for prompting a patient when they can breathe. The stimulus can be audible or visual. It would have been obvious to one skilled in the art to have further modified Hurd et al such that it includes a means for indicating to a patient when they can breathe in order to allow the patient to have some form of indicator which shows how much longer they must stay still.

Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's own admission or Hurd et al in view of Hoenninger III et al as applied to claim 20 above and further in view of Matsutani. Applicant and Hurd et al each fails to specifically refer to the use of a drive device to move the patient. It is old and well known in the art to move a patient on an examination table in order to correctly position them for the next desired scan. Matsutani et al is merely one example of such. It would have been obvious to one skilled in the art to have further modified the prior art system disclosed by Applicant or Hurd et al such that it includes a drive device to move the examination table for a second scan in order to correctly position the patient as is a well known expedient in the art.

### ***Response to Arguments***

Applicant's arguments with respect to claims 19-28 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ruth S. Smith whose telephone number is 571-272-4745. The examiner can normally be reached on M-F 7:30 AM-4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Casler can be reached on 571-272-4956. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
